## General information

### Organisation

This handbook groups products by logical category such as walls, worksurfaces, storage etc. Within the groups, products are listed in a logical order as far as possible, the sequence being determined by the need to keep products of a similar appearance together, since the natural way to seek a product in the handbook is by reference to the illustrations.

### How to specify a product

This number in itself is not always sufficient to specify a product, because it may be necessary to add codes for certain options or finishes. The complete reference that specifies a complete product, including all options relating to it, is called the 'order code'. The order code is of variable length, depending on the number of options required. Make a correct and complete order code for a product, match your number with the example to ensure that you have not forgotten or added an option.

### Weights

Weights of products may be obtained on request from Herman Miller's customer services department.

### Dimensions and abbreviations

All dimensions are shown in millimeters. The following abbreviations are used:  
h: height, w: width, d: depth,  
Ø: diameter

Note: the width of a product is the distance side to side while its depth is the distance front to back. This can occasionally be confusing in the case of drawers or shelves.

### A commitment to quality

For details of the Herman Miller warranty, please go to <http://globaldealers.hermanmiller.com/about-us/warranty>

### Delivery times

Visit [www.hmeuronet.com](http://www.hmeuronet.com) for the latest Leadtime Statement. If you do not currently have access to the site please contact customer services.

### Ordering information

All orders must be given in writing by letter, fax, email or EOS, in order to avoid error or duplication. Telephone orders will not be accepted.

### Conditions of sale

Terms and Conditions of sale are available on request. Herman Miller's (or our approved dealer's) acknowledgment form will confirm delivery dates and will form the basis of our mutual contract.

### Technical improvements

The information in this handbook is believed correct at the time of publication. In line with Herman Miller's policy of continuing product improvement, the right is reserved to make changes in technical specification without notice.

### Colour variations

Herman Miller takes great care in the selection of materials for all its products, but does not have control over the natural variations that occur in leather, wood and to a lesser extent fabrics. The company warranty does not therefore extend to matching colour, grain or texture of these materials beyond normal commercial tolerances. All types of coloured material when exposed to ultraviolet light (such as sunlight) may be subject to fading.

### Customer's own material

Use of customer's own material must be approved by the company prior to acceptance of order. Material must be delivered prepaid to Herman Miller or your Herman Miller dealer, fully identified with the customer's order number, and the Herman Miller reference numbers of the item(s) for which the material is intended. Except if otherwise stated, requirements for customer's own material are based on w1370 fabric. Contact Herman Miller customer services department for confirmation of exact number of meters required.

Additional fabric may be required if pattern matching is needed. Stripes will run vertically unless otherwise specified. If customer's own material is difficult to apply, or if customer's own leather is supplied, or if product must be modified, extra charges will be made, and the company reserves the right to cancel an order at any time if customer's own material is inadequate for any reason.

### Swatching

All Herman Miller swatches are representative samples taken from actual materials used for production purposes. They are therefore within commercial tolerances but should not be regarded as colour standards.

### 'Finishes'

This term is used to describe a number of materials and colour application methods, for example painted metals, self coloured extrusions and moulded plastics, etc. It is not practical to swatch every different type of these 'hard finishes' and they are represented in the Herman Miller swatching programme by the use of coated papers. These samples are chromatically accurate within normal commercial tolerances but obviously cannot represent the slightly differing appearance of a colour when applied to materials with different surface textures.

### Gloss levels

Herman Miller subtly alters gloss levels of painted finishes for optimum effect and, again, the appearance of a 'finish' swatch may not always correspond to the exact gloss level of the end product. Where a variety of gloss levels are used for the same colour, this is generally indicated on the swatch label. The difference in underlying material and in the gloss level variations described in the paragraphs above do not generally pose any difficulty in the normal use of swatching for colour referencing purposes.

### Customer's Own Image (COI)

For COI, please refer to <http://globaldealers.hermanmiller.com/COI>.
